

Grey is the new Green

To all Plasti-Fab Advantage ICF System customers:

Plasti-Fab will be transitioning the color from **green** to **grey** in order to reduce the UV inhibitor requirement on the 8" Advantage ICF product line only.

During this transitioning you may notice still some green cross tie webs primarily in 90 Degree Corner Blocks and specialty blocks such as Height Adjusters, Brick Ledge, Taper Top, 45 Degree Corners and Tee Blocks.

Many ties in the first production transition could appear green, grey and even black until the process is complete. This means that some future orders may see shipments of 8" products containing green, black and/or grey cross tie webs.

A new 4x3 green label for the 8" Advantage ICF will be applied to the cardboard protection packaging for easy identification. Green label for 8" and a white label for 6".

Contact your local Plasti-Fab Sales Rep for any further questions.
